

240km/h Tangle With A Spike Strip

Anton Koen, owner of Nojack, had a narrow escape when he hit a spike strip while in hot pursuit of some bandits. Popularized world wide by their YouTube channel "Anton Koen", Anton hit the spike strip around 200km/h to catastrophic effect. It didn't save the tyre.

Or the rim. Or the suspension and rear bumper even, but it 100% prevented explosive decompression at high speed, thereby avoiding an accident.

It also got him far enough away from the guys that laid the strip waiting for their next victim and to a place of safety before the catastrophic damage overcame even the world's best tyre sealant. In Nojack's own words:

On Monday evening/Tuesday morning at around 12pm NoJack units responded to a stolen motorbike on the back of a trailer traveling on the N12 Highway towards Witbank. Our High Speed Intervention unit moved out to try and intercept the vehicle with the stolen motorbike. But due to an increase in the spiking's and metal debris that are on the highways now days the vehicle A Audi RS3 hit a metal object at 200 km/h shredding the back wheel. Luckily all of our response vehicles are fitted with the Sureseal product and thanks to this the driver was able to safely stop the vehicle without losing control of the vehicle at that high speed. Thanks to the Sureseal Team for showing us that this product is the way forward for any road user who needs that extra bit of safety on our already dangerous roads.
